

Plus MN1500/AA/LR6 BP32

Duracell offers a wide range of reliable batteries that are particularly suitable for use in electronic devices with constant energy consumption. Duracell Plus AA batteries are alkaline batteries that are ideal for powering your everyday electronic devices. Duracell Plus AA has up to 100% longer lifespan* (*for AA size batteries compared to the minimum average lifespan in the 2015 IEC digital camera test. Results may vary depending on device or usage patterns (IEC website)). Unused Duracell batteries can remain fully operational for up to 10 years when stored at room temperature. Duracell recommends these batteries for everyday electronic devices such as digital cameras, photo flashes, toys or portable speakers. Of course, they are also suitable for frequently used devices such as flashlights, portable game controllers, razors, toothbrushes, etc. Together with the Apollo 11 mission in 1969, Duracell was the very first battery on the moon.
