

Anti-collision module

052.7217 Anti-collision module incl. 200mm cable for floor lifts

SmartMetals obviously highly values the safety of her products. Various models of the floor/wall lifts and height adjustable trolleys for (touch) monitors and interactive whiteboards are standard fitted with an anti-collision protection. This protection ensures that, when the upward or downward movement of the lift is blocked, the lift stops and slightly moves back in the opposite direction.

For lift systems and trolleys that are not standard featured with this protection SmartMetals has added an optional anti-collision module to the accessories. This "plug and play" module can be easily connected between the motor (lifting column) and the control box of the lift.

The 052.7217 can, where appropriate, also be used in combination with other brands of floor lifts or trolleys. Refer to the SmartMetals sales team for advice.

Please note ⇒ Two modules are required for a double column lift; this goes for the 052.7110, 062.7105 and 172.7022-46/55.

Anti-collision module

Features

Colour: Black

Maximum load: 120 kg

Other information: • Reaction time: 1.5 seconds after activation of the elevator • cable length: 200mm
