SpinetiX ARYA - Custom Aspect Ratio Setup

Do you have a display which does not use the common aspect ratio 16:9? The SpinetiX Professional Services team can help you set up a custom canvas within SpinetiX ARYA for you to be able to create content according to your display requirements.

Deliverables & Requirements

- ✓ This service allows you to build content for displays which have aspect ratios other than 16:9 in horizontal mode, or 9:16 in vertical mode. The SpinetiX Professional Services team creates a canvas in SpinetiX ARYA for the specific display resolution. This allows the user to be able to create projects for such displays. Furthermore, it arranges for the player to display the project properly on the screen. Please note that SpinetiX ARYA functionality does not support remapping or rearrangement of the display area beyond cropping and scaling.
- ✓ Custom video modes require an HMP350 player, or alternatively a player fitted with a DSOS™ SYSTEMS license such as an HMP400/400W or a 3rd party player.
- ✓ The dealer/customer is responsible for configuring the display and/or LED controller if any.
- ✓ Customers must be available to work live online with the SpinetiX Professional Services team and within their operating hours to provide visual feedback of display output during configuration.

Important information

- > This service covers only a single-player configuration and multi-player video walls are excluded.
- > This service covers only a single resolution to work with a single display configuration (display only or display + LED controller). Any additional combinations will require an additional service.
